

## EARLY COMBINATION PLAN FOR POLYARTCULAR ONSET/COURSE JIA WITH POOR PROGNOSTIC FACTORS<sup>1</sup>

All JIA categories (except systemic) **with** RF, CCP, radiographic damage, or arthritis of hip, wrist, cervical, or sacroiliac joints, in combination with moderate/high disease activity<sup>1</sup>

JADAS= Juvenile Arthritis Disease Activity Scale.

**Footnote 1:** Moderate/high disease activity defined as  $\geq 1$  active joint, elevated ESR or CRP, or MD or Pts global  $\geq 3$  (see ref 2).

**Footnote 2:** Adalimumab, etanercept (if no uveitis or IBD), golimumab, or infliximab (in line with the Norwegian LIS TNF BIO recommendations).

**Footnote 3:** If tried 2 anti TNFs, change mechanism to tocilizumab or abatacept.

The treatment plan is based on the Childhood Arthritis and Rheumatology Research Alliance (CARRA) Consensus treatment plans, expert reviews, and the American College of Rheumatology (ACR) treatment plans.
